

Overview

RMSS is a leading provider of Enterprise Risk Intelligence solutions, integrating best-practice risk, compliance, event and claims management.

RMSS recognise that organisations have varied business processes and requirements. To complement our primary product range of products, we offer a range of enhancement modules including the **chemicalmanager**, **competencymanager**, **contentmanager**, **healthmanager** and **permitmanager**.

chemicalmanager

The **chemicalmanager** is designed to promote compliance with relevant legislative requirements by providing a comprehensive inventory of all chemical management activities. Through database management companies are able to register, detail and report on all their hazardous substances and dangerous goods, including the use, storage, supplier and classifications of the materials.

competencymanager

The **competencymanager** is designed to list the skills and competencies required for specific tasks, jobs and personnel (including contractors) within an organisation. The reporting allows users to 'match' personnel to suitable tasks/jobs and to maintain a register and matrix of skill, training, competency, qualifications, certifications etc.

contentmanager

The **contentmanager** is designed to allow organisations to upload and publish documents and photos such as policies and procedures. Acting as a document publishing system it provides you with version control and ensures employees and contractors are accessing the intended version of any particular document.

healthmanager

The **healthmanager** is designed to provide assistance in identifying and accurately managing an organisation's Occupational Health and Safety and injury management issues. Through database management companies are able to maintain employee records surrounding medical assessments and reviews, monitor health, as well as injury management for non work related injuries.

permitmanager

The **permitmanager** creates, registers and manages work permits including confined spaces, safe work, working at heights, excavation and hot work. Work Permits are linked to existing hazard identification and risk assessments, and can be closed and reopened continuously saving time and maintaining evidence of work actions and issued permits.
