

## Effective OHS and Injury Management

### Overview

Managing the safety of employees is a critical responsibility for every employer.

Workplace injuries can have a big impact on your organisation, and managing the health of injured employees is critical to rehabilitation and successful re-entry into the workplace.

A focus on injury management and sustainable return to work outcomes can promote faster recovery and reduce the overall impact on affected personnel and costs to the business.

Your organisation needs the most effective software tool to achieve best practice injury management: **healthmanager**.

### Our Product

The **healthmanager** is a central software database for employee medical assessments and reviews, health monitoring and injury management.

The **healthmanager** meets the following business requirements:

- Manages workplace and non-work related injuries and occupation health issues
- Provides powerful injury management, rehabilitation and return to work facilities
- Monitors health, surveillance and assessment of industrial hygiene, audiometry, immunisations, vaccinations, exposures etc.
- Records items against an employee as a result of an OHS assessment (including any conditions/physical requirements)
- Records, creates and prints Suitable Duties, Rehabilitation and Return to Work Plans
- Records, creates and prints referrals to internal/external providers
- Manages prevention and support programs e.g. incident and accident training, immunisation, medical tests, eye testing etc.
- Automatic review schedule engine to assist in managing assessment review dates
